**User Interface Design     :** HTML, AJAX,JQUERY,JAVASCRIPT

**Web Browser              :** Mozilla, Google Chrome, IE8,OPERA

**Software                 :**  XAMPP Server

**Demo video————————————-**

View Demo

Hospital Management System is a web application for the hospital which manages doctors and patients. In this project, we use PHP and MySQL database.
The entire project mainly consists of 3 modules, which are

- Admin module
- User module
- Doctor module

**Admin module:**

1. Dashboard: In this section, admin can view the Patients, Doctors, Appointments and New queries.
2. Doctors: In this section, admin can add doctor's specialization and mange doctors (Add/Update).
3. Users: In this section, admin can view users detail(who take online appointment) and also have right to delete irrelevant user.
4. Patients: In this section, admin can view patient's details.
5. Appointment History: In this section, admin can view appointment history.
6. Contact us Queries: In this section, admin can view queries which are send by users.
7. Doctor Session Logs: In this section, admin can see login and logout time of doctor.
8. User Session Logs: In this section, admin can see login and logout time of user.
9. Reports: In this section, admin can view reports of patients in particular periods.
10. Patient Search: In this section, admin can search patient with the help of patient name and mobile number.

Admin can also change his/her own password.
**User module (patient):**

1. Dashboard: In this section, patients can view the his/her profile, Appointments and Book Appointment.

2. Book Appointment: In this section, Patient can book his/her appointment.

3. Appointment History: In this section, Patients can see his/her own appointment history.

4. Medical History: In this section, Patients can see his/her own appointment history.

User can update his/her profile, change the password and recover the password.

**Doctor module:**

1. Dashboard: In this section, doctor can view his/her own profile and online appointments.

2. Appointment History: In this section, Doctor can see patient's appointment history.

3. Patients: In this section, doctor can manage patients (Add/Update).

4. Search: In this section, doctor can search patient with the help of patient name and mobile number.

Doctor can also update his profile, change the password and recover the password.

**How to run the Hospital Management System (HMS) Project**

1. Download the zip file

2. Extract the file and copy hospital folder

3.Paste inside root directory(for xampp xampp/htdocs, for wamp wamp/www, for lamp var/www/html)

4. Open PHPMyAdmin (http://localhost/phpmyadmin)

5. Create a database with name hms

6. Import hms.sql file(given inside the zip package in SQL file folder)
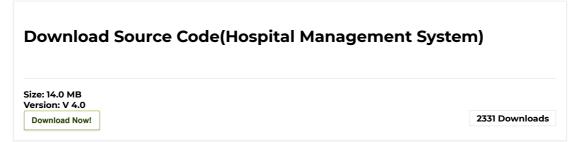

7.Run the script http://localhost/hospital (frontend)

**Login Details**

Login Details for admin : admin/Test@12345

Login Details for Patient: test@gmail.com/Test@123

Login Details for Doctor: test@demo.com/Test@123
